Summary

Backend developer with 3+ years of experience on a bank's core system, working with Oracle Database, SQL and PL/SQL across loans, collateral, cards and regulatory reporting. Specialized in finding the root cause of issues in business-critical legacy systems and shipping minimal, tested fixes. I also build full web products with PostgreSQL, JavaScript/TypeScript and Next.js, and I am currently deepening my skills in Python/Django and Docker. Available for remote work.

Technical Skills

Languages: SQL, PL/SQL, Python, JavaScript, TypeScript, HTML, CSS

Databases: Oracle Database, PostgreSQL, Supabase, Row Level Security (RLS), query optimization, views, stored procedures

Frameworks: Next.js, Tailwind CSS, Oracle Forms, Oracle Reports

Tools: Git, GitHub, VS Code, Jira, PL/SQL Developer, Netlify, Vercel, Linux VPS, Cloudflare, Shopify (Liquid)

Currently learning: Django, Java, Spring Boot, Docker, React, AWS

Domain: Core banking, interest and installment calculation, regulatory and delinquency reporting, root cause analysis

Work Experience

Data & Systems Developer (Core Banking Databases)

January 2026 – Present

Zeta Banco S.A.E.C.A., Asunción, Paraguay

- Diagnose and resolve core banking issues (loans, collateral, cards and accounts) using Oracle SQL, PL/SQL, Oracle Forms and Oracle Reports, managing work through Jira tickets.
- Identified the root cause of installment interest mismatches, traced to the operation date used when generating the payment schedule.
- Detected and proved with data that a join with repeated rows was duplicating capital in a credit risk report; fixed the query with a DISTINCT subquery.
- Extended a PL/SQL credit bureau delinquency-reporting package to include checking and past-due accounts without changing the existing loan and card logic.
- Added business rules to loan inventory views while analyzing dependent objects, and replaced hard-coded values with parameters by module, currency and branch.

Data Analyst & Systems Support

February 2023 – January 2026

Zeta Banco S.A.E.C.A., Asunción, Paraguay

- Optimized slow SQL queries with correlated subqueries and multiple joins on loan and credit tables.
- Analyzed historical account tables to detect and explain balance discrepancies.
- Fixed a division-by-zero error (ORA-01476) across six PL/SQL objects in a liquidity ratio report.

Projects

WalletIQ | JavaScript, Supabase, PostgreSQL, Claude API, Netlify

Live personal finance web app: authentication, free trial, PostgreSQL schema with RLS, multi-currency support, AI receipt scanner and financial chatbot.

SalesClose | JavaScript, Supabase, PostgreSQL, Netlify

Multi-tenant SaaS platform for closing sales over WhatsApp: organizations, leads, conversations and templates, with RLS data isolation and per-country pricing.

Multi-business ERP (in progress) | Next.js, TypeScript, Tailwind CSS, Supabase, Vercel

Management system with per-business data isolation, role-based permissions, configurable commissions and inventory with unit conversion.

Education

B.Sc. in Computer Engineering (in progress)

2023 – 2029 (expected)

School of Engineering (Facultad Politécnica), Universidad Nacional de Asunción

Languages

Spanish: native. English: intermediate (B1), fluent reading of technical documentation.
